DETAILED ACTION

1. This action is in response to applicant's amendment received on 08/20/04.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 13-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Perrone (5,669,277) in view of Saitoh et al. (6,241,234).

Perrone discloses the invention substantially as claimed including a sheet punching device, die holes 44, a plurality of punch trains (Fig. 1 and 2), a plurality of punches 42, a first rotatable shaft 16 and a second rotatable shaft 18. Perrone does not show an initial position detecting sensor and a sheet end detecting sensor. However, Saitoh teaches the use of an initial position detecting sensor 71 and a sheet end detecting sensor 31 for the purpose of accurately punching the sheet at a predetermined position. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Perrone's device by providing the initial position detecting sensor and the sheet end detecting sensor as taught by Saitoh in order to obtain a device to accurately punch the sheet without stopping the sheet.

Response to Arguments

4. Applicant's arguments have been fully considered but they are not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a plurality of punch trains disposed on **a roller, selectively** using one of a plurality of punch trains provided on a rotating shaft to effect a plurality of hole patterns, and a sensor for detecting an initial position of **the punch and die pair**) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Applicant argues that Saitoh et al. do not disclose a sensor for detecting an initial position of each of a plurality of punch trains. However, Saitoh et al. disclose a sensor 71 for detecting an initial position (col. 12, line 33-35) of a punch train and it is capable of detecting the plurality of punch trains disclosed by Perrone.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 3724

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
